

Practical - 1

Practical Title: Project Initiation, Requirement Analysis, Sitemap, Wireframe, and GitHub Setup

Problem Definition: Initiate the semester-long StudentHub portal by identifying the problem scope, user roles, key modules, navigation flow, and minimum 10 pages. Create a sitemap, low-fidelity wireframe, project folder structure, README file, and GitHub repository.

A. Theory

1. What is the URL and parts of the URL?

Answer: A URL(Uniform Resource Locator) is a unique address used to find and access a website or resource from the web.

Parts of URL: (for example:

<https://www.geeksforgeeks.org/computer-networks/components-of-a-url/>)

https:// - Scheme

www - Subdomain

geeksforgeeks - Domain

org - Top level domain

[/computer-networks/components-of-a-url/](#) - Path

Reference - <https://www.geeksforgeeks.org/computer-networks/components-of-a-url/>

2. How does an HTML file process in a web browser?

Answer: When we open the html file, the browser reads the code, scans it, then builds the page - displays the content, applies style from css to the page, and then displays a visual version of the html page. The browser turns the code into a formatted page that looks clean and interactive.

Reference - <https://dev.to/ofodile/how-html-works-in-the-browser-25pa>

3. How will page navigation flow be managed among all HTML pages?

Answer: Page navigation flow can be managed among all HTML pages using the <nav> element. It groups the collection of links of pages so the structural map can easily be identified by the search engine and users. The HTML anchor(<a>) tag is used for the links.

Reference - <https://www.geeksforgeeks.org/html/html-nav-tag/>

4. How will GitHub commits be maintained after each practical?

Answer: After completing each practical, the updated files will be committed to the git repository with a commit message indicating the changes made. The commits are then pushed to the Github repository.

Commands:

git add . - to add the modified files

git commit -m "message" - create a commit with a message

git push origin main - push the commit to GitHub

Wireframes

Description: Figure 1.2 Home page wireframe

Description: Figure 1.3 About page wireframe

The wireframe shows a registration form titled "Registration Details" centered on the page. The form includes input fields for "Full Name", "Email", "Student ID", "Department", "Password", and "Confirm Password". At the bottom of the form are two buttons: "Register" and "Cancel". The page header features a "Logo" on the left and "StudentHub" in the center. A navigation bar below the header contains links for "Home", "About", "Events", "FAQ", "Contact", "Register", and "Login".

Description: Figure 1.4 Registration page wireframe

The wireframe shows a login form titled "StudentHub Portal Login" centered on the page. The form includes input fields for "Enter student ID" and "Enter password", a link for "Forgot password?", and a "Login" button. The page header features a "Logo" on the left and "StudentHub" in the center. A navigation bar below the header contains links for "Home", "About", "Events", "FAQ", "Contact", "Register", and "Login".

Description: Figure 1.5 Login page wireframe

Description: Figure 1.6 Dashboard page wireframe

Description: Figure 1.7 Events page wireframe

The wireframe shows a profile page layout. At the top, there is a header bar with a 'Logo' on the left, a 'Search' input field in the center, and 'Full name ID' with a dropdown arrow on the right. Below the header, the main content area features a circular 'Profile Picture' placeholder on the left and a 'Change picture' button on the right. Below these, there is a large light-gray box containing a form to edit user information. The form has five rows, each with a label and a text input field: 'Name:', 'Email:', 'Student ID:', 'Department:', and 'Semester:'. All input fields contain the placeholder text 'fhdugrngrkjlre'. At the bottom of this form box are two buttons: 'Edit' and 'Save'.

Description: Figure 1.8 Profile page wireframe

The wireframe shows a contact page layout. The top header bar is split into two sections: 'Logo' on the left and 'StudentHub' on the right. Below the header is a navigation menu with seven items: 'Home', 'About', 'Events', 'FAQ', 'Contact', 'Register', and 'Login'. The main content area below the menu is titled 'Contact Us'. It contains a form with three input fields: 'Name', 'Email', and 'Message'. The 'Name' and 'Email' fields are short, while the 'Message' field is a larger text area. Below these fields is a 'Send' button.

D. GitHub Repository Link:

Link: <https://github.com/prep04-yl/StudentHub-Portal>

E. Challenges Faced:

It was a challenge to create wireframes on figma but I took the help of AI and then made them after learning it.

F. Learning Outcomes:

This helped me gain practical knowledge on wireframes, requirement analysis, sitemap and mainly GitHub. These will surely help me in future projects.

Faculty Remarks: (Keep this blank for faculty)
