Practical Title: Responsive UI Design using CSS Grid, Flexbox, and Bootstrap/Tailwind

Problem Definition: Design responsive layouts for Home, About, Registration, Dashboard, and Events pages using CSS Grid and Flexbox. Optional to use CSS framework such as Bootstrap or Tailwind. Ensure mobile-first responsiveness.

A. Theory

1. How does the layout adapt for mobile, tablet, and desktop screens?

Answer: The layout uses Flexbox and grid, a CSS technique. It is a responsive technique in which elements adjust their size, position, arrangement according to the screen width. This way the layout adapts for mobile, tablet and desktop screen.

2. Which layout technique is used and why?

Answer: CSS flexbox and grid are used as they help create structured page layouts and are useful for aligning and arranging elements. They make the layout flexible.

3. Are typography, spacing, colors, and contrast readable?

Answer: Yes, proper font size, colors, spacing and contrast have been used to make the page more clear and readable and consistent across the pages;

4. Is the framework used consistently without unnecessary inline CSS?

Answer: Yes, the CSS and layout are applied consistently using external CSS without unnecessary inline CSS.

B. Implementation/ Output/Result

C. Evidence of Work (Screenshots)

The registration form is titled "StudentHub Portal Registration" and is set against a light gray background. It contains a section for "Registration Details" with the following fields: Full Name, Email, StudentID, Department, Password, and Confirm Password. At the bottom of the form are two red buttons: "Register" and "Cancel".

The login form is titled "StudentHub Portal Login" and is centered on a light gray background. It features a red header bar with the "StudentHub" logo and a navigation menu with links: Home, About, Events, FAQ, Contact, Feedback, Register, and Login. The login form itself has two input fields: "Enter student ID" and "Enter password". Below these fields is a blue link for "Forgot password?" and a red "Login" button.

The image shows a web page titled "Student Profile". At the top, there is a navigation bar with a "STUDENT" logo, a search bar, and a user profile section for "Prey Patel" with ID "2XDCEXXX" and a "Profile" dropdown menu. The main content area has a light gray background. On the left, there is a circular profile picture placeholder with the text "Profile Picture" and a red "Change Picture" button. To the right of this, the title "Student Profile" is displayed in red. Below the profile picture, there is a white form with three fields: "Name" (containing "Prey Patel"), "Email" (containing "preypatel@example.com"), and "Student ID" (containing "2XDCEXXX").

Description:Figure 3.7 html with css profile page

The image shows a web page titled "Contact Us". The page has a light gray background. In the center, there is a white form. At the top of the form, the title "Contact Us" is displayed in bold. Below the title, there is a paragraph of text: "If you have any questions, suggestions, or feedback, please feel free to reach out to us. We value your input and are here to assist you." Below this text, there is a section titled "Contact Information". This section contains three input fields: "Name" (with placeholder text "Enter your name"), "Email" (with placeholder text "Enter your email"), and "Message" (with placeholder text "Enter your message" and a text area). At the bottom of the form, there is a red "Submit" button.

E. Challenges Faced:

I had a problem positioning the elements to create a proper layout using flexbox. I learned its main properties properly and applied them to arrange them systematically.

F. Learning Outcome:

Learned to apply CSS for styling and page layout.

Use of flexbox for arranging and aligning elements to create a proper layout.
